Plesk

Konfiguration neu anlegen

```
/usr/local/psa/admin/sbin/httpdmng --reconfigure-all
```

Backup über Konsole (Command Line)

```
/opt/psa/bin/pleskbackup <command> [<arguments>] [<options>]
```

```
/opt/psa/bin/pleskbackup server -v --output-file=/private-backup/pleskbackup
```

HTTP to HTTPS Umleitung

```
RewriteEngine On  
RewriteCond %{HTTPS} off  
RewriteRule (.*?) https://%{HTTP_HOST}%{REQUEST_URI}
```

Let's encrypt workaround for multiple domains

```
sudo -u psaadm bash  
/usr/local/psa/admin/plib/modules/letsencrypt/scripts/le-run -d  
domain.tld -d www.domain.tld
```

Domain über Shell aktivieren

```
/usr/local/psa/bin/domain --on domainname.tld
```
