

# Inhaltsverzeichnis

This mode allows you to display a list of pages which are similar to the current page because they share some of the structured data. Which columns are used for similarity comparison has to be given in the cols option. Additional filters and sorting options can be set. Here is an example:

The shown config will look for pages which share values in the columns task\_tags and type. A maximum of 5 pages is shown, sorted by volume.

Refer to datatable on what options are available.

This mode will not disable caching for the page, so the list might not always be up to date.
